About the Consumer Price Index

The Consumer Price Index (CPI) measures quarterly changes in the price of a 'basket' of goods and services which account for a high proportion of expenditure by metropolitan households. This 'basket' covers a wide range of goods and services, arranged in eleven separate groups (see next page for groups). The capital city indexes measure price movements over time in each city individually. They do not measure differences in retail price levels between cities. Further information about the CPI is contained in the Australian Bureau of Statistics publication entitled "Consumer Price Index: Concepts, Sources and Methods, 2005" (cat. no. 6461.0).
